## AI Engineer — LLM Systems, Agents & MCP

ewertoncom297@gmail.com | github.com/Ewertonslv | linkedin.com/in/ewertonsilva | Brazil (UTC-3) · Remote

### SUMMARY

AI Engineer with 4+ years shipping production software, now focused on **AI automations, agents and internal tools**. I bring the discipline of regulated fiscal software — where a bug is a fine — to LLM systems: multi-agent orchestration and MCP on the Claude API, serverless on AWS, and full-stack delivery in TypeScript/Node and Python. I ship, not prototype — a merged fix in BerriAI/litellm and a published open-source MCP server.

### EXPERIENCE

**Software Engineer — Viggo Sistemas**

2022 — Present

GPTW-certified retail-tech ERP (founded 2009) — POS, fiscal and payments for 5,000+ retailers across 16 Brazilian states.

- Built from scratch a **delivery-control module with a kanban board** to track orders through fulfillment.
- Led a large part of a **10-month migration** that unified POS and Order sales logic and retired entire legacy modules.
- Designed and built a usage-analytics system from scratch — a client-side tracker, a custom authenticated Horse/Delphi API, and an aggregated-counter model in PostgreSQL (upsert, offline-safe local queue) — so screen keep/remove calls are driven by real usage data, not guesses.
- Work daily in Brazil's high-stakes fiscal domain — NF-e, NFC-e, MDF-e, SPED and the CBS/IBS tax reform — where a bug is a fine.
- Build internal AI tooling on the Claude API — multi-agent squads and developer-workflow automation — as the team shifts from Delphi to AI-assisted development.
- Own the production PostgreSQL database — **700+ tables** (products, participants, fiscal, orders), triggers and stored procedures.

### SELECTED PROJECTS

**recepia** — Multi-tenant AI SaaS that books and confirms appointments over WhatsApp with LLM intent classification, a prompt-injection guardrail (OWASP LLM01), PII masking and cost/latency observability. Live at [recepia.app.br](#) · source on [GitHub](#). FastAPI · PostgreSQL.

**evolution-whatsapp-mcp** — Built and published an open-source MCP server exposing WhatsApp as tools for any MCP client. TypeScript · MCP SDK.

**Monarch-IA** — 12-agent orchestration platform on the Claude API, with human-approval gates and circuit breakers. Python · Claude API · Docker.

**scout** — Serverless multi-agent research pipeline on AWS: Step Functions fans out to Bedrock-powered Lambda agents (planner → workers → critic → synthesizer); also exposed as an MCP server. AWS Lambda · Step Functions · DynamoDB · Bedrock · SAM · GitHub Actions OIDC.

### OPEN SOURCE

Fixed a silent cost-tracking bug in **BerriAI/litellm** (LLM gateway, ~600M downloads/month): custom tiered pricing above non-standard thresholds was dropped in `get_model_info`, defaulting billing to base rates. Shipped fix + regression test; reviewed and merged by maintainers (#30880).
