SUMMARY

Software Engineer with 4+ years shipping production software, now focused on **AI automations, agents and internal tools**. I bring the discipline of regulated fiscal software, where a bug is a fine, to LLM systems: multi-agent orchestration and MCP on the Claude API, serverless on AWS, and full-stack delivery in TypeScript/Node and Python. I ship with tests and CI: a merged fix in BerriAI/litellm, a published open-source MCP server and a public benchmark for prompt-injection filters.

EXPERIENCE

Software Engineer · Viggo Sistemas — 2022 to present

GPTW-certified retail-tech ERP (founded 2009): POS, fiscal and payments for 5,000+ retailers across 16 Brazilian states.

- Built from scratch a **delivery-control module with a kanban board** to track orders through fulfillment.
- Led a large part of a **10-month migration** that unified POS and Order sales logic and retired entire legacy modules.
- Designed and built a usage-analytics system from scratch: a client-side tracker, a custom authenticated Horse/Delphi API, and an aggregated-counter model in PostgreSQL (upsert, offline-safe local queue), so screen keep/remove calls are driven by real usage data, not guesses.
- Work daily in Brazil's high-stakes fiscal domain (NF-e, NFC-e, MDF-e, SPED and the CBS/IBS tax reform), where a bug is a fine.
- Build internal AI tooling on the Claude API (multi-agent squads and developer-workflow automation) as the team shifts from Delphi to AI-assisted development.
- Own the production PostgreSQL database: **700+ tables** (products, participants, fiscal, orders), triggers and stored procedures.

SELECTED PROJECTS

recepia · Multi-tenant AI SaaS that books and confirms appointments over WhatsApp with LLM intent classification, a prompt-injection guardrail (OWASP LLM01), PII masking and cost/latency observability. 260+ automated tests and CI on GitHub Actions. Live at recepia.app.br · source on GitHub. FastAPI · PostgreSQL.

guardrail-bench · CLI that measures the recall of a prompt-injection filter against a labelled public dataset (deepset/prompt-injections, 662 messages: 263 attacks, 399 legitimate). Reports recall, precision, F1 and a confusion matrix, lists the attacks that got through, and fails a CI build below a chosen threshold. Born from measuring my own regex filter: it caught 15.6% of attacks. Python, standard library only · MIT · 50 tests · public repository.

evolution-whatsapp-mcp · Built and published an open-source MCP server exposing WhatsApp as tools for any MCP client. TypeScript · MCP SDK · published on npm.

scout · Serverless multi-agent research pipeline on AWS: Step Functions fans out to Bedrock-powered Lambda agents (planner, workers, critic, synthesizer); also exposed as an MCP server. Infrastructure as code with an AWS SAM template, 20 offline tests (pytest + moto) and CI. AWS Lambda · Step Functions · DynamoDB · Bedrock · SAM · GitHub Actions.

Monarch-IA · 12-agent orchestration platform on the Claude API, with human-approval gates and circuit breakers. Python · Claude API · Docker.

liveaula · Full-stack EdTech monorepo: a Fastify API, a Next.js web app and a React Native (Expo) mobile app sharing one typed contract (Zod schemas), so a contract change becomes a type error in all three apps instead of a runtime bug. CI on GitHub Actions. TypeScript · Next.js · Fastify · Prisma · PostgreSQL · Expo.

OPEN SOURCE

- Fixed a silent cost-tracking bug in **BerriAI/litellm** (LLM gateway, about 90M downloads/month on PyPI): custom tiered pricing above non-standard thresholds was dropped in `get_model_info`, defaulting billing to base rates. Shipped fix + regression test; reviewed and merged by maintainers (#30880).
- Open PRs in **BerriAI/litellm** (#30881, approved, waiting for merge), **modelcontextprotocol/servers** and **IBM/mcp-context-forge**.

SKILLS

Programming	Python, TypeScript, JavaScript, SQL, Delphi
AI / LLM	Claude API, AWS Bedrock, LLMs, MCP, Multi-Agent Systems, Prompt Engineering, guardrails and evaluation with labelled datasets (recall, precision, F1)
Backend	FastAPI, Node.js, Fastify, REST, WebSockets
Frontend	React, Next.js, Tailwind CSS, React Native
Data	PostgreSQL, SQLite, Prisma, SQL
Cloud & DevOps	AWS (Lambda, Step Functions, DynamoDB, Bedrock, API Gateway, SAM), Docker, GitHub Actions, Git
Testing	pytest, Vitest, CI/CD, code review

EDUCATION

Information Systems · UFRN

Universidade Federal do Rio Grande do Norte. Coursework complete, final thesis pending.

LANGUAGES

Portuguese (native). English: strong technical reading and writing (daily use with docs, code and PRs in international projects); spoken: limited, actively improving.
