SUMMARY

AI & Full Stack Engineer with 4+ years shipping production software. I bring the discipline of regulated financial software to AI — building and **deploying** multi-agent systems on the Claude API (orchestration, RAG, MCP) and full-stack apps in TypeScript and Python. I ship to production, not just prototypes: a live AI SaaS on a custom domain and an open-source package published on npm.

EXPERIENCE

Software Engineer — Viggo Sistemas

2021 — Present

GPTW-certified retail-tech ERP (founded 2009) — POS, fiscal and payments for 1,200+ businesses across 13 Brazilian states.

- Ship critical ERP features used by 1,200+ businesses: e-invoicing (NF-e, NFC-e, MDF-e), POS and financial reporting.
- Implemented Brazil's CBS/IBS tax reform and SPED modules — high-stakes fiscal logic where bugs cost money.
- Build internal AI tooling on the Claude API: multi-agent squads, automation and developer workflows.
- Advanced PostgreSQL (triggers, procedures, 50+ tables); 400+ commits in a production system.

SELECTED PROJECTS

recepia — Multi-tenant AI WhatsApp receptionist SaaS; books and confirms appointments, classifying replies with an LLM. Deployed live (recepia.app.br). FastAPI · PostgreSQL · LLM.

evolution-whatsapp-mcp — Open-source MCP server exposing WhatsApp as tools for any MCP client. Published on npm. TypeScript · MCP SDK.

Monarch-IA — 12-agent orchestration platform with human-approval gates and circuit breakers; used it to build 7 apps. Python · Claude API · Docker.

liveaula — Full-stack EdTech monorepo: Fastify API, Next.js web and Expo mobile sharing one typed contract. TypeScript · Prisma.

SKILLS

Languages	Python, TypeScript, JavaScript, SQL, Dart
AI / LLM	Claude API, LLMs, RAG, MCP, Multi-Agent Systems, Prompt Engineering
Frontend	React, Next.js, Tailwind CSS, React Native
Backend	FastAPI, Node.js, Fastify, REST, WebSockets
Data & DevOps	PostgreSQL, Prisma, Redis, Docker, GitHub Actions, Git
Spoken	Portuguese (native), English (professional working proficiency)
